Giant Swallowtail, the largest butterfly in North America This one has a wing span of five and a half inches, although they can reach seven inches. buzzardsandbones. Follow.Â The black swallowtail is a butterfly found throughout much of North America. Its caterpillar is called the parsley worm because the caterpillar feeds on parsley. The *Papilio polyxenes* demonstrates polyandry (a form of polygamy in which a woman takes two or more husbands) and a lek mating system (in which many males gather to engage in competitive displays), showing no male parental care and display sites. The black swallowtail has a wingspan of 6.9â€“8.4 cm, and females are typically larger than males. photo credits: D. Gordon E. Robertson, Beatriz Moisset. cool-critters.

All North American swallowtails have somewhat spherical eggs. Most of the caterpillars have prominent eyespots. Swallowtail chrysalises resemble bits of leaf or wood. I followed the tiger swallowtail pictured for an hour as she tirelessly fed on nectar. Swallowtails are almost always beating their wings for balance while they hang from flower blossoms. I shot only available light, and consider myself extremely fortunate to have captured some shots of this energetic butterfly. There are only about 100 species in North America. These small butterflies hold their wings over their back when at rest. In most species, the males have greatly reduced forelegs not unlike the brushfoots, but the females have all six legs well-developed. Pipevine Swallowtail *Battus philenor* (Linnaeus, 1771). Family: Papilionidae. Subfamily: Papilioninae. Identification: Upper surface of hindwing iridescent blue or blue-green. Underside of hindwing with submarginal row of 7 round orange spots in iridescent blue field. Wing Span: 2 3/4 - 5 inches (7 - 13 cm). Life History: Adult males patrol likely habitat in search of receptive females. Flight: In the East and California, adults fly primarily in late spring (though as early as late February or March) and summer, but the butterfly is commoner in late summer and fall in the South and Southwest. Where lack of freezing temperatures permit, adults mate. Caterpillar Hosts: Pipevines (*Aristolochia* species), including *Aristolochia californica*, *A. serpentaria* and others.
