Over the centuries, rice has become a part of the traditions of many cultures. In some societies, it is traditional to throw a handful of rice on newlywed couples, symbolizing the wish for a large family and prosperity. In India, rice is traditionally the first food that bride offers her new husband. One half cup of rice has approximately 100 calories, and those calories are rich in important vitamins and minerals, including folic acid, iron and zinc. Today rice is grown in Peru, Egypt, and even the United States, but over 90% of the world's rice is still grown in Asian countries.
