Decreased Central Nervous System Disorganized Generation of Electrical Activity in the Nervous System and Muscles . 19 Dec 2017 . On Jan 1, 2011, Aage R. Møller published the chapter: Generation of Electrical Activity in the Nervous System and Muscles in the book:

Muscular contraction produces electrical activity, which increases as the contraction grows stronger. The waveforms recorded with primary disease of muscles differ somewhat from those that occur when the muscles are deprived of motor innervation. Examination of the pressure and the composition of cerebrospinal fluid can aid in the diagnosis of central nervous system infections, some tumours, and multiple sclerosis. In a lumbar puncture, also known as a spinal tap, cerebrospinal fluid is obtained by inserting a needle through the skin in the small of the back (below the termination of the spinal cord) so that it passes between the vertebrae into the fluid sac surrounding the spinal cord and nerve roots. Further, it is important to know where in the nervous system specific components of the recorded evoked potentials are generated, so that the exact anatomical location of an injury can be identified on the basis of changes in specific components of the electrical potentials that are being monitored.
