More Info. Butterflies of the Neotropical Region, Part 7. £215.00. More Info. Using sequence data from the mitochondrial cytochrome oxidase subunit II region (COII) and the nuclear gene wingless, we conducted a phylogeographical study of the holarctic skipper *Hesperia comma* to elucidate patterns of genetic diversity and to infer historical and contemporary processes maintaining genetic variation. One hundred and fifty-one individuals were sampled from throughout North America and Eurasia, focusing on California and adjacent regions in the western United States where morphological diversity is highest compared to the rest of the range. Analyses of sequence data obtained Bernard d'Abrera, Butterflies of the Holarctic Region, Part I, Hill House, Victoria 1990, S.98.
