See global and country-level data on changes in literacy.Â Literacy is a key skill and a key measure of a population's education. In this entry we discuss historical trends, as well as recent developments in literacy. From a historical perspective, literacy levels for the world population have risen drastically in the last couple of centuries. While only 12% of the people in the world could read and write in 1820, today the share has reversed: only 14% of the world population, in 2016, remained illiterate. Over the last 65 years the global literacy rate increased by 4% every 5 years " from 42% in 1960 to 86% in 2015.1. Two year olds can easily become frustrated when they have the understanding but are unable to express what they want to say. 2 Why being Two is so important: Evidence shows that communication, language and literacy are essential foundations for children s life, learning and success. The importance of their early experiences is clearly recognised by the following: A child s development score at just 22 months can serve as an accurate predictor of educational outcomes when they are 26.
