Cartographies of Time. Published by Princeton Architectural Press 37 East Seventh Street New York, New York 10003. For a free catalog of books, call 1.800.722.6657. For all of the advances in chronological scholarship in the early modern period, the graphic ambitions of the cartographers proved hard to fulfill. The textbooks said over and over again that chronology and geography were the two eyes of history. But if this were the case, the early modern history student was liable to end up with serious problems of depth perception. The timeline seems among the most inescapable metaphors we have. And yet, in its modern form, with a single axis and a regular, measured distribution of dates, it is a relatively recent invention. Understood in this strict sense, the timeline is not even 250 years old. How this could be possible, what alternatives existed before, and what competing possibilities for representing historical chronology are still with us, is the subject of this book. From literature to art history to technology, Cartographies of Time offers a fascinating and dimensional lens on what it means to peer from a single moment of time outward into all other moments that came before and will come after, and inward into our own palpable yet subjective perception of permanence and its opposite. Cartographies of Time is the first comprehensive history of graphic representations of time in Europe and the United States from 1450 to the present. Authors Daniel Rosenberg and Anthony Grafton have crafted a lively history featuring fanciful characters and unexpected twists and turns. From medieval manuscripts to websites, Cartographies of Time features a wide variety of timelines that in their own unique ways—curving, crossing, branching—defy conventional thinking about the form. Another timeline uses the different parts of the human body to show the genealogies of Jesus Christ and the rulers of Saxony. Ladders created by missionaries in eighteenth-century Oregon illustrate Bible stories in a vertical format to convert Native Americans. Timeline Maps Mapping time has long been an interest of cartographers. Visualizing historical events in a timeline or chart or diagram is an effective way to show the rise and fall of empires and states, religious history, and important human and natural occurrences.
