One of the more fascinating, but sometimes frustrating parts of ceramics is learning to balance the innumerable factors that affect the outcome of a ring. Glaze ingredients, the clay body used, ring cycles, atmospheres, kiln-stacking techniques, and geography (to name a few variables) can all affect ring results. This may be frustrating if you don't control those variables, but if you do, there is opportunity for new discoveries. By changing just one variable, the same glaze recipe can be deliberately manipulated to yield different results.
