Description

The kid in all of us has always wanted the newest, coolest, shiniest, fastest, loudest and overall most envious toy on the block. Sometimes that toy is simply acquired, off-the-shelf, usually amidst the crush of others wanting the same thing. Few of us ever think of actually creating our own new toy. But the fact is that these end up being the niftiest toys around. Those with more modest and technical tastes, without machine shops and welding gear out back, an endless supply of engines, wheels, sheet metal and paint, have to make do with the kitchen table, living room floor or garage workbench, and whatever they can scrounge at the local computer store. Some may call them geeks or nerds, but their talents are just as important for getting to the Moon as any wanna-be rocket scientist or piston-head. In fact, these "geeky" projects have guided the galactic engines that put smart robots on distant planets, analyzed the data they collected, and shared it with the rest of the world.

Key features

- Audience includes computer hobbyists, electronics fans, and students in need of science fair and class projects
- Projects include PC-TVs, PC-phones, dual monitors, a PC-PVR (like TiVo for the computer), boom boxes, dual-head voice cards, searching for alien signals, unravelling DNA, and Yahoo and MSN voice services
