What Computer-Aided Learning achieves – Generally classroom teaching has a high teacher-to-learner ratio which leads to less interaction between teacher and learner. One to one relationship is emphasized more in Online learning than in classroom lectures. According to Tiffin & Rajasingham (1995), the traditional classroom teaching means that besides organizing a place for learning, it is necessary to organize when teachers and learners meet and how they use their time. Typically, classroom instruction provides a set group of students with a set chunk of instruction on set dates for set per Link. Microcomputers In Education 2010. 1,901 views. Share. Like. Who Should Use the Microcomputer Guide? The USAID Managers Guide to Microcomputers in Development is intended for development personnel who are associated with the management of projects or institutions. The microcomputer represents a significant advance in computer technology both in terms of reductions in the cost of computer power and the ease with which the system itself can be used. Important technological advances include the fact that thereâ€™s more to do, and that we are still learning how it can be done (and who should be doing what, + how what they do should be measured) shouldnâ€™t be at all surprising. Wayan Vota says: September 3, 2018 at 2:13 pm. Wow, great insight on the relative age of ICT and development. A microcomputer is a small, relatively inexpensive computer with a microprocessor as its central processing unit (CPU). It includes a microprocessor, memory, and minimal input/output (I/O) circuitry mounted on a single printed circuit board(PCB). Microcomputers became popular in the 1970s and 1980s with the advent of increasingly powerful microprocessors. The predecessors to these computers, mainframes and minicomputers, were comparatively much larger and more expensive (though indeed present-day
