Antimicrobials, Resistance and Chemotherapy welcomes submissions of the following article types: Correction, Editorial, Erratum, Hypothesis and Theory, Methods, Mini Review, Opinion, Original Research, Perspective, Review, Specialty Grand Challenge and Technology and Code. All manuscripts must be submitted directly to the section Antimicrobials, Resistance and Chemotherapy, where they are peer-reviewed by the Associate and Review Editors of the specialty section. Articles published in the section Antimicrobials, Resistance and Chemotherapy will benefit from the Frontiers impact and tiering sys growing tumors " less responsive i, Faster growing tumors " more responsive and curable i, Highly aggressive cancer " almost incurable e.g. Non-Hodgkin's lymphoma Diffuse large cell lymphoma - curable in advanced stages (more aggressive) Indolent lymphoma - responds to treatment but likely incurable in advanced stages (low grade) Increase in growth fraction - negative response to Rx-? emergence of resistance Normal cells Never develop resistance Resistance of. tumor cells associated with sensitivity of normal cells Bone marrow and GIT cells are most vulnerable Chemotherapy options i, Induction fo Antineoplastic resistance, often used interchangeably with chemotherapy resistance, is the resistance of neoplastic (cancerous) cells, or the ability of cancer cells to survive and grow despite anti-cancer therapies. In some cases, cancers can evolve resistance to multiple drugs, called multiple drug resistance. There are two general causes of antineoplastic therapy failure: Inherent genetic characteristics, giving cancer cells their resistance and acquired resistance after drug exposure, which is
