This indicates that the frequency response of $\hat{I} \gg 1$ is very similar to the one of reactance of a series LC resonant circuit. Thus, the radiator can be represented by a series resonant circuit comprised of resistor R_r , inductor L_r and capacitor C_r [26]. The impedance of the series resonant circuit can be written as This indicates that the frequency response of $\hat{I} \gg 1$ is very similar to the one of reactance of a series LC resonant circuit. RF Circuit Design: Theory and Applications. Reinhold Ludwig. 4.1 out of 5 stars 12. Paperback. This straightforward volume takes a distributed, transmission line approach to RF circuit design, with a focus on methodology fundamentals and minimal discussion of theoretical concepts. The Second Edition introduces RF design tools such as the Smith Chart, dual port networks, S-parameters, and provides extensive coverage of RF filter design, matching networks, active and passive device modeling, narrow and broadband amplifiers, mixers, and oscillators. Approaches RF design from a circuit perspective, so readers need little or no background in electromagnetic fields. Prominently features key RF concepts in sidebars throughout the text.
