Tropical-climate plants can tolerate a range of conditions but never freezing temperatures. Plants that originate from the geographical zone between the Tropic of Cancer and Tropic of Capricorn are traditionally called tropical plants, but not all of that zone is hot, steamy rainforest. Desert and semiarid areas also exist in the zone, and tropical plants may require full-sun conditions or semishade, such as that in a jungle. Tropical plants are hardy in U.S. Department of Agriculture plant hardiness zones 10b through 13. credit: OceanFishing/iStock/Getty Images. Sapodilla is widely planted in south Florida, where the fruit is marketed locally and shipped to northern and eastern U.S. markets. The fruit, however, is not commonly seen in the United States. In southern Mexico and Central America where sapodilla is native, it is considered to be one of the best of the tropical fruits. Gilly (1943) addressed this problem of confused nomenclature. It seems the generic name *Achras*, given by Linnaeus, was based upon a plate and description by the botanist Plumier. Unfortunately, the plant described by Plumier is not sapodilla, leading to the misnaming. Gilly suggests that *Manilkara zapotilla* (Jacq.)

These areas are usually located 20-40 degrees north or south of the equator.Â Subtropical landscape or garden design borrows a lot of
its flair from the tropics. Bold, bright colors, textures and shapes are common in subtropical garden beds. Dramatic hardy palms are
used frequently in subtropical gardens to provide deep green color and unique texture.Â Plants in the some subtropical areas have to
endure blazing heat, thick humidity, times of heavy rains or long periods of drought, and also temperatures that can drop as low as 0 F.
While subtropical plants may have the exotic look of tropical plants, many of them also have the hardiness of temperate plants.
