International Environmental Law Introduction International environmental law is a body of international law concerned with protecting the environment, primarily through bilateral and multilateral international agreements. Source for information on International Environmental Law: Environmental Science: In Context dictionary. Introduction. International environmental law is a body of international law concerned with protecting the environment, primarily through bilateral and multilateral international agreements. International environmental law developed as a subset of international law in the mid-twentieth century.

The Basic Environment Plan is designed to engage all sectors of the society in a concerted effort to protect the environment. The Plan maps out the basic approach of environmental policies with the mid-21st century in view and identifies four long-term objectives. It also sets the direction of measures to be implemented by the early 21st century for achieving these objectives. Enactment of the Basic Environment Law.Â In its first chapter, the Basic Environment Law sets out three basic principles for environmental conservation and the responsibilities of each sector of the society -- including the national and local governments, corporations, and citizens -- in living up to these principles.
