# 2<sup>nd</sup> WORLD CONGRESS ON ENDOSCOPIC EAR SURGERY

Bologna - Italy

27, 28, 29 April 2017

CHAIRMEN:

LIVIO PRESUTTI, MUAZ TARABICHI, DANIELE MARCHIONI

TOPICS:

- Principles of endoscopic ear surgery
- Endoscopic external ear surgery
- Endoscopic middle ear surgery
- Endoscopic inner ear surgery
- Middle ear tumors
- Stapes surgery
- Acoustic neuroma
- Cochlear implants
  
- Live surgery
- Live cadaveric dissection

Endoscopic Ear Surgery has the potential to decrease patient morbidity, prevent disease recurrence and reduce costs. Its capacity to uncover hidden anatomy within the small dimensions of the ear has made it essential for functional surgery. Endoscopic surgeries distinctly reduced residual cholesteatomas thanks to the good visualization of hidden sites, such as the anterior and posterior epitympanic spaces, sinus tympani, facial recess, and hypotympanum. World Congress. Publications. This type of primary endoscopic ear surgery has to be distinguished from secondary endoscopic ear surgery, where standard microscopic ear surgery is supplemented by endoscopic surgery. Having to hold the endoscope in one hand, surgery has to be performed single-handedly, which is awkward. In cases of extensive bone removal or excessive bleeding, the view through the endoscope lens is obscured; therefore; the endoscope cannot fully substitute the microscope.
