Many UMass Amherst pre-professional students major in biochemistry, biology, 262, lab 269 [Chemistry majors: 265, 266, 267, 268]; Physics (Physics 131,

Medical Schools: Medical schools are academic medical centers, either public or private, associated with teaching hospitals and medical clinics. Physicians at these institutions treat patients, mentor fellows and medical residents, teach medical students, and quite often conduct clinical or basic science research. Public medical schools often recruit students who they feel are likely, as professionals, to benefit the local community. This means that institutions are often biased in the admissions process toward "in-state" applicants. The recent report on the Scientific Foundations for Future Physicians (SFFP) and the revised Medical College Admissions Test (MCAT) reframe the preparation for medical school (and other health professional schools) in terms of competencies: what students should know and be able to do with that knowledge, with a strong emphasis on scientific inquiry and research skills. In this article, we will describe the thinking that went into the SFFP report and what it says about scientific and quantitative reasoning, focusing on biology and physics and the overlap between those fields.Â Based on that framework, we discuss the implications for undergraduate biology and physics education if students are to be prepared to demonstrate these competencies. PMID: 23737625.
